Cherry Hill Nursery

A Few Specialties for Spring -- 1904.

12,000 SUGAR MAPLES, from 6 to 25 feet tall, all sizes.

This we consider the very best street and shade tree. Also, very desirable for planting sugar orchards in rough and hilly pastures.

4,800 NORWAY MAPLES, all sizes, from 1 to 6 inches in diameter.

This too is a very handsome shade tree, of globular form, foliage very dense and green; a very suitable tree for planting near the sea shore, it being perfectly hardy in any situation.

600 ENG. SYCAMORE MAPLES, 6 to 9 feet tall, very straight and handsome.

Another perfectly hardy tree for planting near the seashore.

200 PAPER AND YELLOW BIRCH, 6 to 8 feet.

1,000 AMERICAN AND ENGLISH ELMS, all sizes.

50 MAGNOLIA SPECIOSA, large flowering trees, 4 to 8 feet. EXTRA.

500 THURLOW WEEPING WILLOWS, 6 to 8 feet, slim but straight and nice.

200 THURLOW WEEPING WILLOWS, 12 to 14 ft., VERY STOCKY. Specimens.

200 MOUNTAIN MAPLES, 6 to 8 feet. Nice bushy specimens.

N. B. As we wish to reduce our acreage, and some of the land must be cleared, we will make SPECIAL INDUCEMENTS to those who will buy in quantity, by the row or block.

6,000 NATIVE AZALEAS, five varieties, all perfectly hardy, and well adapted to this climate. Nearly all will bloom this season.

3,000 KALMIA LATIFOLIA (Mountain Laurel), ten inches to two feet tall. Twice transplanted, very bushy, and will all lift with a ball of earth.

20,000 WHITE PINES, 18 inches to three feet tall; handsome, bushy plants; have all been twice transplanted. Nursery grown from northern seed.

This is without doubt the *best* and most profitable evergreen for New England. They will soon be in demand for forest planting, or for screens and wind-breaks. They can often be planted successfully till June, but it is every way better and safer to plant them *early*; as soon as the frost is well out and the ground is dry and warm. This applies to all evergreens.

3,000 AUSTRIAN PINES, 2 to 5 feet tall.

A very handsome, dark green species, hardy everywhere; fine for sea-shore planting.

8,000 NORWAY SPRUCE, 8 inches to 4 feet tall.

Generally hardy, and more used for screens and hedges than any other ever green.

700 PICEA PUNGENS (the Blue Spruce of Colorado), 2 to 7 feet. We consider all *blue*, but there is a difference, and the *bluest* are worth much the most.

200 ENGELMAN SPRUCE (from Colorado), 4 to 5 feet tall and very *bushy* and symmetrical. This is a very valuable tree, nearly as blue as the *pungens*, and in time makes a more compact, pyramidal tree.

400 CONCOLOR FIR (Colorado), from 4 to 7 feet high. For a specimen evergreen considered by many "the best in the world," to which we fully agree.

A prominent Rochester nurseryman said of our evergreens, last fall: "They are the best I have seen in any nursery."

The following, of which we have a surplus, we will sell at less than half price, viz.:

40,0 BERBERIS THUNBERGI, 1 year, small size but heavily rooted. \$5.00 per 1,000.

300 CHINESE BLUE WISTARIA, extra heavy, 6 to 8 feet long, \$12 per 100.

5,000 HELIANTHUS MAXIMILIANUS, \$5 per 1,000; \$1 per 100.

Very late and wonderfully showy.

6,000 HARDY PHLOX, very best varieties. Also, a lot best mixed, \$5 per 100.

1,000 GOLDEN GLOW, \$10 per 1,000.

300 RHUBARB, heavy clumps. Two very best kinds, Monarch and Linnaeus.

To clear the land,—the lot \$15.

T. C. THURLOW & CO.

West Newbury, Mass., March 1, 1904.
